

Nagoya City University, RIKEN CBS internship : review

The outstanding researchers were all happy to talk about their research and what they wanted to elucidate, which made me realize the importance of curiosity and ambition for researchers. I also learned how advanced and flexible the research environment is at RIKEN CBS.

ポストドクの方々が日常の些細に思えることでも興味を持ち、それについて議論する姿勢を見て、様々な角度から自分の研究に繋がるものを探す姿勢や議論すること・考え続けることの重要性を再認識しました。

I learned that curiosity and ambition for research are essential for researchers. Throughout the internship program, I was taught by many active researchers, all happy to talk about their research and what they wanted to elucidate. It was clear that they were all proud of their research and enjoyed conducting and discussing it.

While observing the exact experimental system and advanced techniques up close, they carefully explained the details of the experiments and answered our questions. It was as if the contents of a high-level paper were smoothly entering my brain.
